POS CODE(S)	**LN0003602146**
PAYMENT CONTRACTS	**2 active**

CONTRACT ID	ACTIVE	MONTHS	VOLUME	TXNS	FEES
PC0000280938	2025-09 to 2025-09	1	€198	1	€5
PC0001263218	2025-09 to 2026-01	5	€839,235	105	€21,325

Multiple Payment Contracts under the same merchant typically indicate separate POS terminals or e-commerce / MOTO splits. Contract PC0000280938 only appears in September 2025 with a single 198 EUR transaction - likely a test or legacy terminal.

CARD MIX & BRAND COVERAGE

INTERNATIONAL CARDS	€839,433
BANCOMAT (IT DEBIT)	€0

100.0%

- International Cards
- Bancomat (Italian domestic debit)

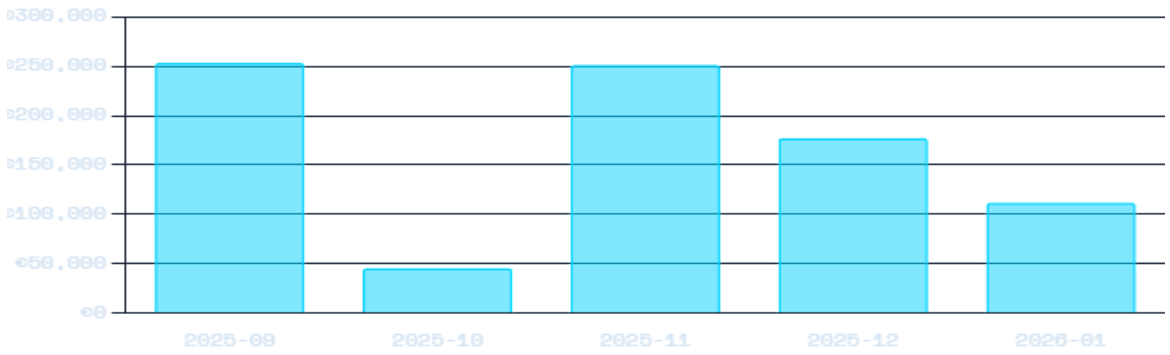
Brand-level breakdown unavailable in monthly PDF.

Nexi reports only two card categories at the statement level: Bancomat (Italian domestic debit network) and International Cards (Visa, Mastercard, AMEX, Maestro, JCB, Diners, etc all combined).

To get a Visa-vs-Mastercard-vs-AMEX split, plus issuing bank, BIN ranges, and country of issuer, you must export the per-transaction CSV from **business.nexi.it** under the "Transazioni" section. Drop that CSV into the source folder and re-run the analyzer with the planned --transactions-csv flag.

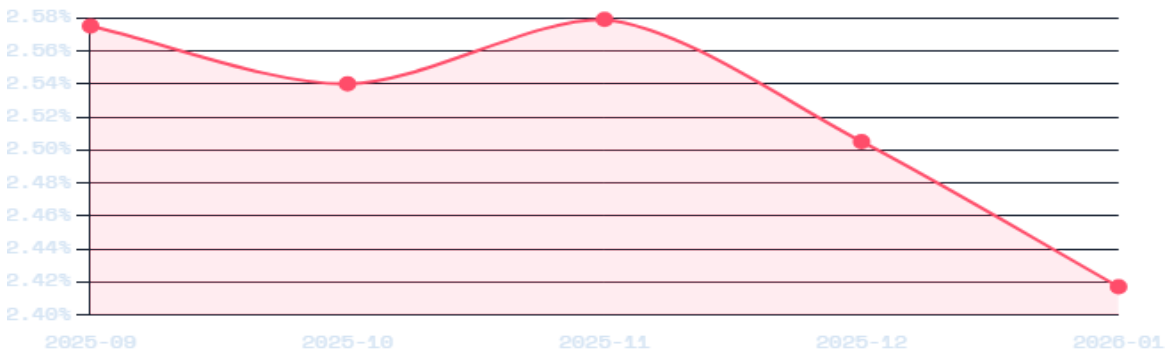
MONTHLY VOLUME

Gross processed per month - all card types in EUR



EFFECTIVE RATE BY MONTH

Total fees as % of gross volume - lower is better



FEE COMPOSITION

Where the money goes: issuer interchange, card scheme fees, Nexi acquirer markup, stamp tax

Cross-Border Cost Indicator

Where this merchant sits on the issuer interchange spectrum. EU regulation (IFR) caps interchange on European-issued consumer cards. Cards issued outside the EEA (US, UK post-Brexit, Switzerland, Asia, Middle East) carry inter-regional interchange tiers several multiples higher. The chart and table below show the merchant's actual blended rate against typical European market reference rates for each card category.

ACTUAL BLENDED INTERCHANGE + SCHEME

246 bps

= 2.458% of every transaction

LOADING OVER EEA DEBIT BASELINE

+216 bps

vs IFR-capped 30 bps EEA debit reference

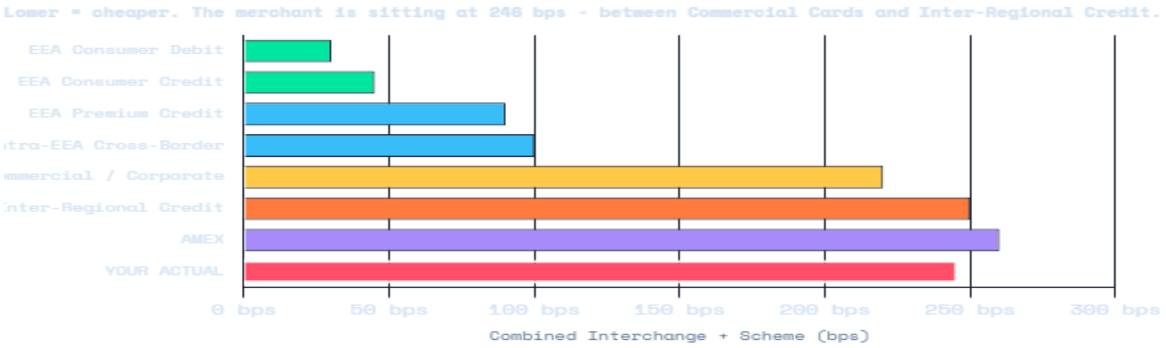
ACQUIRER MARKUP (NEXI)

8.0 bps

~€1,612 / year annualized

WHERE THIS MERCHANT SITS ON THE INTERCHANGE SPECTRUM

Merchant's actual blended rate vs typical European market reference rates by card category. Lower = cheaper.



REFERENCE RATE CARD TYPICAL EUROPEAN MARKET RATES (DESCRIPTIVE)

CARD CATEGORY	COMBINED IC + SCHEME (BPS)	VS THIS MERCHANT	WHAT THIS CATEG
EEA-issued consumer DEBIT (IFR-capped)	30 bps	216 bps below actual	Italian / European d cards. The cheapest possible category. IF interchange at 20 bp
EEA-issued consumer CREDIT (IFR-capped)	45 bps	201 bps below actual	Italian / European b credit cards. IFR cap interchange at 30 bp
EEA premium credit (Visa Infinite, MC World Elite)	90 bps	156 bps below actual	High-tier consumer Still EEA-issued but premium tier within limits.
Intra-EEA cross-border consumer	100 bps	146 bps below actual	European cardholde traveling within the Same IFR caps but l scheme fees.
Commercial / corporate cards	220 bps	26 bps below actual	Business, purchasin cards. UNCAPPED u IFR. 1.5-2.5% interch typical.
Inter-regional consumer credit (CNP)	250 bps	~ matches actual	Non-EEA cards (US, Brexit UK, Switzerla ME) used in Italy. Th largest pass-throug
AMEX (typical bundled MSC)	260 bps	~ matches actual	American Express h own pricing - typica 3% all-in.

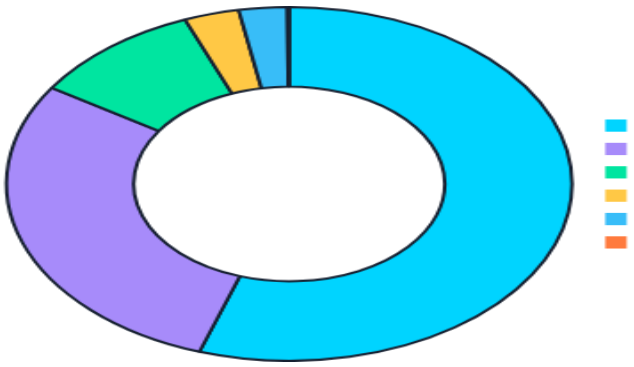
¡ **Factual summary:** Combined interchange + scheme rate of 245.8 bps is 8.2x the IFR-capped EEA consumer debit baseline (30 bps) and 5.5x the EEA consumer credit baseline (45 bps). Nexi acquirer markup component: 8.0 bps (~€1,612 annualized). All transactions in the daily detail are bucketed as international card networks; no per-brand, per-BIN, or per-issuer detail is available from the monthly PDF.

Where The Full Effective Rate Actually Goes

Every component of the all-in cost, decomposed into two buckets: cross-border / FX-driven cost (the portion of the rate that exists because the cardholders are foreign) and the domestic baseline (the portion that would apply to a 100% Italian / EEA consumer card mix). The purpose of this view is to show what share of the merchant's total fee burden is actually inherent to acquiring, versus what share is a function of the customer base.

SHARE OF TOTAL EFFECTIVE RATE

Full rate 2.541% = 84% cross-border / FX + 16% domestic baseline



CROSS-BORDER / FX-DRIVEN

214 bps

84.2% of total effective rate

Cost that exists because the cardholders are foreign. Would follow the merchant to any acquirer on earth.

DOMESTIC BASELINE

40 bps

15.8% of total effective rate

What the rate would be on a 100% Italian / EEA consumer card mix.

FULL EFFECTIVE RATE

254 bps

total observed

FULL COMPONENT BREAKDOWN

EVERY BPS OF THE 254 BPS EFFECTIVE RATE

COMPONENT	BUCKET	BPS	% OF VOLUME	% OF EFFECTIVE RATE	WHAT THIS IS
Layer 2: Cross-border interchange tier uplift	FX / Cross-Border	140.1	1.401%	55.2%	Inter-regional and premium consumer credit cards pay higher IC than the IFR-capped EEA baseline. This is interchange above the 25 bps domestic floor.
Layer 1: Scheme cross-border fees	FX / Cross-Border	73.7	0.737%	29.0%	Visa International Service Assessment (ISA) + Mastercard Cross-Border Assessment Fee (CBAF). Applies when issuer and acquirer are in different countries.
Domestic interchange baseline	Domestic Baseline	25.0	0.250%	9.8%	The IFR-capped portion of interchange that would apply to a 100% Italian / EEA consumer card mix. Set by Visa / Mastercard rules, not negotiable.
Nexi acquirer markup	Domestic Baseline	8.0	0.080%	3.1%	What Nexi actually keeps after passing through interchange and scheme fees. This is the only component of the rate that is negotiable with the acquirer.
Domestic scheme fees baseline	Domestic Baseline	7.0	0.070%	2.8%	The portion of scheme fees (Oneri Circuiti) that would apply to a 100% domestic Italian mix. Visa/MC fixed assessment fees, network access, etc.
Fixed monthly fees (Acquiring EUR + Stamp Tax)	Domestic Baseline	0.3	0.003%	0.1%	EUR 2.50 Commissione di Acquiring in Euro + EUR 2.00 Imposta di Bollo per contract per month. Flat amounts, become a larger bps share on low-volume months.

¡ **Factual summary:** Of the 254.1 bps (2.541%) full effective rate, 213.8 bps (84.2%) is cross-border / FX-driven and 40.3 bps (15.8%) is the domestic baseline (everything that would apply to a pure Italian-issued card mix). If this merchant were processing only domestic cards the full effective rate would be around 0.40% instead of 2.54%.

Per-Transaction FX Cost

The cross-border / FX-driven portion of every sale, expressed both as a flat percentage of ticket and as absolute euros per transaction. The percentage is constant across all sales (it's a rate). Absolute EUR per transaction varies only because ticket sizes vary - and on this account ticket sizes swing from EUR 2,000 to EUR 122,000.

CROSS-BORDER / FX COST PER TICKET

11/11/25	November 2025	2	€33,072.00	€859.87	**€707.17**	2.14%
12/01/26	January 2026	1	€31,300.00	€841.97	**€669.28**	2.14%

¡ **Method note:** Per-transaction FX cost is the cross-border / FX-driven portion of total fees, expressed as a flat percentage of every ticket. The percentage is constant; absolute EUR per transaction varies only because ticket sizes vary. Layer 1 = scheme cross-border assessment (Visa ISA + MC CBAF), derived as observed scheme fees minus a 7 bps domestic baseline. Layer 2 = cross-border interchange tier uplift, derived as observed interchange minus a 25 bps IFR-capped EEA baseline. Both layers are blended estimates - the PDF does not expose the actual brand or issuer-country split.

Notable Observations

Things that stand out in the data - missing fields, reporting opacity, anomalies, and unusual patterns. Each entry is a factual observation from the statements, not a recommendation. Severity is assigned based on impact on the merchant's ability to understand or audit their own acquiring costs.

Combined IC + scheme rate is 8.2x the IFR-capped EEA debit baseline

COST ANOMALY **HIGH**

The EU Interchange Fee Regulation caps domestic and intra-EEA consumer card interchange at 0.20% (debit) and 0.30% (credit). Combined with typical scheme fees this puts the cheapest-possible blended pass-through cost at roughly 30-45 bps. This merchant is paying 245.8 bps - 216 bps above the EEA debit baseline. The gap can only come from non-EEA-issued cards, premium consumer card tiers within IFR limits, commercial / corporate cards (uncapped under IFR), or AMEX volume bundled in. The PDF does not let us identify which of these is driving the cost.

Negative implied acquirer markup in 1 month(s)

DATA ANOMALY **HIGH**

Month(s) showing negative markup: September 2025. In normal months the formula 'Total Commissioni minus Interchange minus Scheme' yields a positive acquirer markup. When a month has substantial refund processing, Nexi credits the gross fees back, which reduces 'Total Commissioni' below the GROSS interchange and scheme totals shown in the per-offering breakdown. The negative number is therefore an artifact of how Nexi nets refund fee credits in the totals - it does NOT mean Nexi paid the merchant. The most extreme case here is September 2025 (-532.63 EUR).

Refunds exceeded 5% of volume in 2 month(s)

REFUND ACTIVITY **HIGH**

2 month(s) had merchant-initiated refunds greater than 5% of gross volume. Highest: September 2025 with EUR 89,845.50 of refunds against EUR 253,379.50 of volume (35.5%). The Nexi PDF does not differentiate between voluntary refunds, partial reversals, and processor-initiated reversals - all show as negative entries in the daily detail.

No interchange tier breakdown

REPORTING TRANSPARENCY **HIGH**

The monthly PDF reports total interchange as a single number per contract. It does NOT disclose which interchange tiers were hit (e.g. consumer debit, consumer credit, premium credit, commercial, inter-regional). Visa and Mastercard publish dozens of tier categories with materially different rates - the merchant has zero visibility into which ones drove the bill.

No card brand split (Visa / Mastercard / AMEX / etc.)

REPORTING TRANSPARENCY **HIGH**

All transactions are bucketed under the single label 'CIRCUITI INTERNAZIONALI' (international card networks). The PDF gives no Visa-vs-Mastercard-vs-AMEX share, no per-brand volume, and no per-brand fee allocation. Per the footer of every page, this detail is only available in the Nexi Business portal at business.nexi.it.

No issuer country / cardholder geography

REPORTING TRANSPARENCY **HIGH**

There is no breakdown of which countries the cardholders' issuing banks are in. For a merchant whose blended IC + scheme is 245.8 bps (5x the EEA credit baseline), this is the single most important missing piece of information for understanding where the cost is coming from.

Zero Bancomat (Italian domestic debit) volume

CARD MIX **MEDIUM**

Across 5 month(s) and EUR 839,433.04 of total volume, the merchant processed zero Bancomat transactions. Either Bancomat acceptance is not enabled on the terminal, the customer base does not present Bancomat cards, or both. For a merchant in Italy this is unusual - the Bancomat network has near-universal Italian debit-card coverage.

Bundled (not interchange-plus) pricing

PRICING MODEL **MEDIUM**

The 'Commissioni Acquiring %' equals 'Totale Commissioni' - meaning the merchant is on a bundled rate (one combined rate that hides interchange, scheme, and acquirer markup as a single line). The per-offering breakdown does show interchange and scheme as informational pass-through, but the merchant's CONTRACTED rate appears to be a single bundled number. This is standard for Italian SMB acquiring but obscures the acquirer markup component from the merchant's normal view.

Effective rate varies by 16 bps month-to-month

RATE VARIANCE **MEDIUM**

Lowest month: January 2026 at 2.417% (241.7 bps). Highest month: November 2025 at 2.579% (257.9 bps). A spread of 16 bps month-to-month is consistent with cardholder mix shift (different mix of issuer countries, brand mix, debit/credit/commercial mix). It is NOT consistent with a single-tier flat rate.

No card type split (debit vs credit vs prepaid vs commercial)

REPORTING TRANSPARENCY **MEDIUM**

The PDF distinguishes only Bancomat vs International Cards. Within International Cards there is no separation between consumer debit, consumer credit, prepaid, or commercial / corporate cards - even though IFR caps these very differently.

No BIN-level detail

REPORTING TRANSPARENCY **MEDIUM**

Individual transactions are listed only by date and reference ID. There is no card BIN range, masked PAN, or any issuer identifier in the daily detail.

Payment Contract PC0000280938 appears in only 1 month with 1 transaction(s)

ACCOUNT STRUCTURE **LOW**

Contract PC0000280938 is active only in 2025-09 with 1 transaction(s) totaling EUR 198.00. This is unusual - either a test transaction, a legacy terminal that fired once, a separate channel (e-commerce vs in-store) that the merchant did not realize was active, or a one-off booking. Worth confirming with the merchant.

Fixed monthly fees added more than 0.5 bps in 1 month(s)

FIXED FEE DISPROPORTION **LOW**

Nexi charges a flat EUR 2.50 'Commissione di Acquiring in Euro' + EUR 2.00 'Imposta di Bollo' (Italian stamp tax) per contract per month, regardless of volume. On low-volume months these flat fees become a larger share of the basis-point cost. Worst month: October 2025 with 1.0 bps of uplift on EUR 45,580.04 of volume.

Key Notes

Period-level facts that frame the rest of the analysis.

¡ **Refund activity detected:** 4 of 5 months had merchant-initiated refunds, totaling €99,771 across 10 transactions.

¡ **Effective rate range:** 2.417% (2026-01) to 2.579% (2025-11). Variance is driven by merchant category mix and the fixed Imposta di Bollo (Italian stamp tax) being a larger share of small months.

+ **Fee composition (full period):** Issuer interchange 65.0% (€13,863) . Card scheme/network 31.8% (€6,773) . Nexi acquirer markup 3.1% (€672). Interchange and scheme fees are passed through unchanged - only the markup is negotiable.

! **Statement does NOT contain card brand or issuer detail:** Nexi monthly Estratto Conto PDFs roll all card transactions into one bucket called "CIRCUITI INTERNAZIONALI" (international card networks). Per-brand (Visa / Mastercard / AMEX), per-card-type (debit / credit / prepaid), per-BIN, and per-issuer breakdowns are only available in the Nexi Business portal at **business.nexi.it** under the "Transazioni" section. Export the per-transaction CSV from there if you need brand-level analysis.
